PROJECTS

Next-Trip Vacations : Travel Booking Platform

[Frontend](#) | [Backend](#) | [Live](#)

Developed a travel booking platform with three key entities: users, travel hosts, and administrator. Travel hosts can create and upload packages, which users can browse and book. The platform also features video calling and real-time chat for direct communication between users and travel hosts. Administrators manage and oversee all activities on the platform.

- Authentication: Secure signup and login using **OAuth**, OTP verification, **JWT**, and Refresh Token.
- Account Management: Personal account pages with wallet, booking history, and profile edits.
- Communication: Real-time chat and video calls between travelers and travel hosts using **Socket.io** and **ZEGOCLOUD**.
- Image Upload: Image upload functionality using **Cloudinary**.
- Backend Architecture: Implemented **Clean Architecture** to ensure flexibility, scalability, and maintainability.
- Frameworks and Libraries: Node.js, Express.js, Socket.io, ZegoCloud, ReactJs, Google OAuth.

FurniCube : E-Commerce Website

[Source Code](#) | [Live](#)

Developed and designed a fully functional E-Commerce website. This integrated solution empowers vendors to efficiently manage their products, inventory and orders while ensuring a seamless shopping experience for customers.

- Used **Embedded JavaScript** and **NodeJs** for development.
 - Implemented **RESTful APIs** and Designed wallets, offers, and coupons.
 - Integrated secure payment gateways: **Razorpay**.
 - Followed **MVC architecture** and created admin-side interfaces for various management tasks.
 - **Session** and **cookie** are used to persist in the user login state.
 - Utilized **Git** for version control. Dynamic routing using **Express.js**.
 - Hosted in **EC2 (AWS)**.
-

MINI PROJECTS

Task Manager App

[Source Code](#)

A sleek and intuitive task management app built with React and TailwindCSS, featuring API integration for managing tasks, user authentication, and task filtering.

Drag-and-Drop Notes App

[Source Code](#)

A simple app that allows users to drag and reposition notes on the screen, with positions saved to localStorage for persistence.

Real-Time Chat App

[Source Code](#)

A real-time chat application built with React.js and Socket.IO, enabling users to send and receive messages instantly with seamless communication.

EDUCATION

Full Stack Development - Intensive Training Program
Brototype, Calicut
